Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of ten two-story, two-bay wide houses late Italianate-style brick houses with shed roofs and wooden scroll-sawn bracketed cornices were built c. 1888 by the same builder responsible for 1800 – 1818 Etting St., across the street. Most of the houses retain their original brick facades, which were always painted; others have been covered with formstone or stucco.

The houses are two stories in height, 12' wide (11'3" for the end houses), and occupy lots 65' deep. Each house is two rooms deep and there is no backbuilding. The houses are constructed in running bond and were originally painted. Each house has a single hooded chimney located near the front and rear of the house. The shed roofs are capped by a wooden cornice consisting of a crown molding supported by two long scrollawn end brackets decorated with grooves, that connect to a lower molding strip, and end with a distinct trefoil pattern. The frieze panel, which also serves as ventilation for the attic, is decorated with a row of leaf-like shapes, created with a jig saw, and has a quarter-round molding at its lower edge. Two smaller scroll-sawn brackets punctuate the frieze area.

The tall, narrow window and door openings have segmentally arched brick lintels, with plain tympanums and wood sills. All of the windows are filled with 1/1 sash or are boarded over. Doorways have single-light transoms, but no original doors remain. The houses sit on fairly low basements, lit by a single-light sash. Each house is reached by three concrete or brick steps.

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses is significant in that it represents the level of architectural stylishness achieved by many builders of small street houses in the years after the Civil War when these same builders were erecting large, fashionable houses on the main streets, often facing parks or squares. While building three-story houses on the main streets that might sell for \$2,500 - \$3,500, they were also providing decent, inexpensive housing for the local working classes that might sell for \$700 - \$900. The houses were built according to a pattern that was juite common to all of the city's neighborhoods of the period c. 1870 to 1910. Recognizing that people held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new middle-class neighborhoods going up in west and east Baltimore. Builders acquired anywhere from an eighth to a half of a city block and built 15' to 18'-wide three-story houses on the main streets (priced at different levels according to the importance of the street and the house width), and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks.

Builders usually sold their small street houses in this neighborhood to German-American semi-skilled workers and laborers who received mortgages from the wide variety of community and ethnically-sponsored building and loan associations. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties or sold them to other investors. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because they belong to a small group of surviving small street houses in northwest Baltimore, the vast majority having been cleared during the various urban renewal projects over the last several decades. They are also important because of their proximity to the various railroad and streetcar-building shops located in this portion of the city, as well as the slaughterhouses and their related industries. Housing of this type was built to provide reasonable-priced housing for the many mainly German immigrants who came to northwest Baltimore to work in these industries in the decades after the Civil War.
